Subject: RE: Canada on chlorpyrifos

Yes. Below is what is on their web has on the human health and next steps. I've asked OPP if they know any more about the timeline that reads to me like they are updating the human health risk assessment after the proposed decision.

Status of Human Health Assessment

Chlorpyrifos is also under re-evaluation in other jurisdictions including the United States Environmental Protection Agency (USEPA) and the European Food Safety Authority. Due to the recent international reviews, new studies on human health have been generated. Health Canada will be requesting, in the near future, that the relevant new information be provided in order to update the existing human health risk assessment including the drinking water assessment. This update will be presented in a future publication.

Next Steps

The public, including the registrants and stakeholders may submit additional information that could be used to refine risk assessments during the 90-day public consultation period upon publication of PRVD2019-05.

All comments received during the 90-day public consultation period will be taken into consideration in preparation of re-evaluation decision document, which could result in revised risk mitigation measures. The re-evaluation decision document will include the final re-evaluation decision, the reasons for it and a summary of comments received on the proposed re-evaluation decision with Health Canada's responses.

Subject: Canada on chlorpyrifos

Kaitlin,
Can you check this with OPP?
thanks

<https://www.natlawreview.com/article/health-canada-proposes-cancellation-all-uses-chlorpyrifos>

'PMRA is proposing the cancellation of most uses of chlorpyrifos, including almost all agricultural uses, due to PMRA's belief that they pose unacceptable risks to the environment.'

Is this correct that Canada is cancelling uses based on environmental effects? What have they said about human health effects?
